KITTEN HEALTH PROGRAM

Congratulations on your new kitten and thank you for choosing Animal Health Clinic as your kitten's veterinarians! It is our goal to provide your new kitten with the best medical care available. We know that kitten ownership is a big responsibility and expenses on a new kitten can certainly add up fast.

In order to help minimize some of your health care costs and to make your cat ownership a happy and healthy experience, we have developed the **Kitten Health Program**. This program will get your kitten started off on his or her vaccines, physical exams and feline leukemia test. Your kitten will be given a thorough medical exam to determine it's general health and to rule out any congenital birth defects. During the course of the Plan two stool samples will be requested to check for intestinal parasites (worms). Parasites are identified by microscopically observing the eggs, which the adult worms, when present, pass into the bowel of the kitten.

1st visit	Kitten Kit (comprehensive Dental & Nutritional instruction)	\$14.00
	Physical examination	\$37.00
	Fecal exam	\$20.00
	Feline Leukemia test/FIV Test	\$47.00
	FeLV vaccine #1	\$29.00
	DPRTC (1 st)	\$29.00
	Strongid (dewormer) #1	\$12.00

	Advantage Multi	\$16.00
	Wellness Exam	\$30.00
2nd visit	2nd DPRTC	\$29.00
	Ear Clean and instruction	\$21.00
	Strongid #2	\$12.00
	FELV vaccine #2	\$29.00
	Wellness Exam	\$30.00
3rd visit	DPRTC (annual)	\$29.00
	Rabies vaccine (1 year)	\$20.00
	Recheck Fecal	\$19.00
	Total Cost:	\$443.00
	20% SAVINGS!!	(\$71.00)
	KITTEN HEALTH PLAN TOTAL COST TO OWNER	\$372.00

PLUS: Coupon towards your pet's spay or neuter **\$20.00**

There are 5 diseases for which we recommend vaccination:

- Distemper** (Panleukopenia) - A viral infectious disease, which temporarily suppresses white blood cell production and also suppresses the immune system. Any cat can develop distemper. Kittens, due to their immature immune systems, are especially susceptible and it can be fatal.
- Calici Virus** Any age cat can contract a respiratory virus, which can result in severe respiratory complications and oral ulcers, but once again, kittens are especially vulnerable, and it can also be fatal.
- Rhinotrachetis** Another respiratory virus, similar in nature and complications to the Calici virus.
- Feline Leukemia** A virus that permanently suppresses the immune system, making the cat extremely susceptible to any viral or bacterial infection that it comes in contact with. Feline Leukemia is a fatal disease. The average life span of a cat with feline leukemia is less than 2 years. The immature immune system of kittens makes them especially susceptible to FeLV.
- Rabies** A fatal viral disease which attacks the central nervous system. Transmissible to both humans and animals by the bite of an infected animal.

Not included in the Kitten Health program are the Feline Heartworm prevention, the FIP and Bordetella Vaccine, or any medical treatment for a problem detected on the physical exam.

Spaying and neutering are routinely preformed at 6 months of age.
