### **PUPPY HEALTH PROGRAM** **(Starting at 10 weeks of age)**

Congratulations on your new puppy and thank you for choosing Animal Health Clinic as your puppy's veterinarians! It is our goal to provide your new puppy with the best medical care available. We know that dog ownership is a big responsibility and expenses on a new puppy can certainly add up fast.

In order to help minimize some of your health care costs and to make your dog ownership a happy and healthy experience, we have developed the **Puppy Health Program**. This program will get your puppy started off on his or her vaccines, physical exams, intestinal parasite screens and dewormer. Your puppy will be given a thorough medical exam to determine it's general health and to rule out any congenital birth defects. During the course of the Plan two stool samples will be requested to check for intestinal parasites (worms). Parasites are identified by microscopically observing the eggs, which the adult worms, when present, pass into the bowel of the puppy.

<b>1<sup>st</sup> visit</b>	Puppy Kit (Comprehensive Dental & Nutritional instruction)	<b>\$17.00</b>
	Physical examination	<b>\$37.00</b>

**PLUS:** Coupon towards your pet's spay or neuter **\$20.00**

#### **There are 7 diseases for which we recommend vaccination:**

- **Distemper** A viral infectious disease that affects any system of the body. All dogs are susceptible, but in young animals, it is usually fatal.
- **Hepatitis** Another viral disease affecting the liver and kidneys of young dogs.
- **Leptospirosis** A spirochete bacterial infection transmitted usually through rodents: can be transmitted to humans.
- **Parainfluenza** A viral respiratory infection that is highly contagious.
- **Parvo** A severe and often fatal viral infection of the gastrointestinal tract, characterized by vomiting, diarrhea, and often death.
- **Corona** Similar to Parvo, causing vomiting and diarrhea.
- **Rabies** A fatal viral disease which attacks the central nervous system. Transmitted to both humans and animals by the bite of an infected animal.

Not included in the Puppy Health Program are the Lyme, Bordetella, & Giardia vaccines, heartworm prevention or any medical treatment for a problem detected on exam. After the initial vaccinations, an annual physical, blood screen, vaccines, heartworm and fecal exam are recommended to promote adequate immunity and general good health of your dog.

**Spaying and neutering are routinely performed at 6 months of age.**
